

MICROCOMPONENTS
FOR LUXURY GOODS, MEDICAL DEVICES
AND OTHER INDUSTRIES
WITH HIGH TECHNOLOGY VALUE

BARON
Petit - Précis - Précieux

BARON was founded over 40 years ago in a region with a history of watchmaking, and develops exceptional know-how in bar turning for small high-precision parts for spectacles, luxury goods, medical devices, aerospace and defence.

In the land of watchmaking, the company leverages a synergy of skills and highly qualified labour to guarantee careful work and quality that is recognised by the most demanding customers.

BARON adds more value to small dimensions and precision through precious materials, worked materials and high-quality service.

Today, many reputed names of the fashion and luxury goods industries rely on the competitiveness and responsiveness of the company.

SMALL

Know-how of small parts is in the company's DNA

From the start, the know-how of BARON has been focussed on small parts (below 1 mm if needed).

On that scale, the slightest defect becomes critical, and that is why the company endeavours to obtain flawless surface conditions and precision within a few microns.

PRECISE

Work and quality standards

- **Production:** a machine base that makes it possible to achieve high precision and repeatability.
- **Organisation:** while retaining the flexibility of a small enterprise, the company applies great discipline in compliance with procedures to obtain the end result expected by the customers from the first part up to the end of the order.

PRECIOUS

High-value partner

- **Materials:** BARON works with all materials, and is specialised in precious metals.
- **Products:** most of the parts and components are used to make fine luxury objects, spectacles, watch straps, fashion accessories and top-quality leather goods.
- **Service** combining responsiveness, flexibility and reliability.

Small parts, high precision

< 1 mm to 20 mm

Applications

Components for spectacles, medical devices (including implantable devices), leather goods, fashion accessories and jewellery

Examples

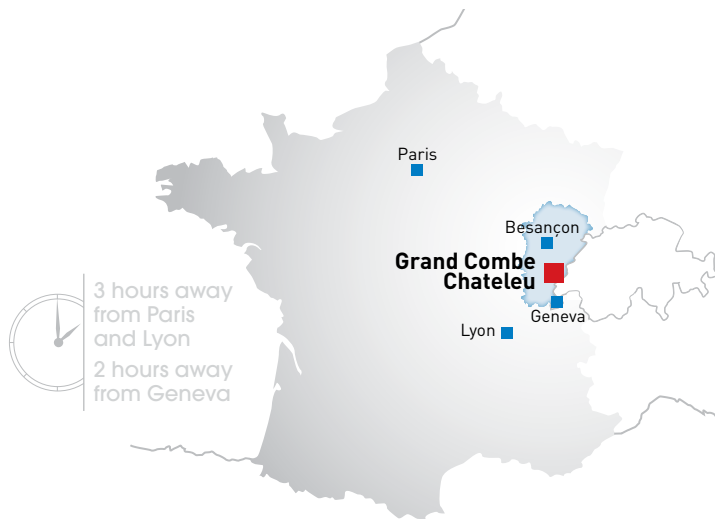

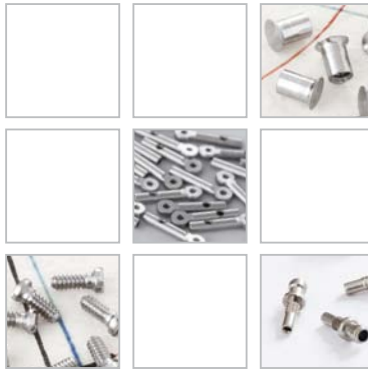

Watch barrets and screws, endoscope components, loops for leather goods, belt pins, jewellery parts
